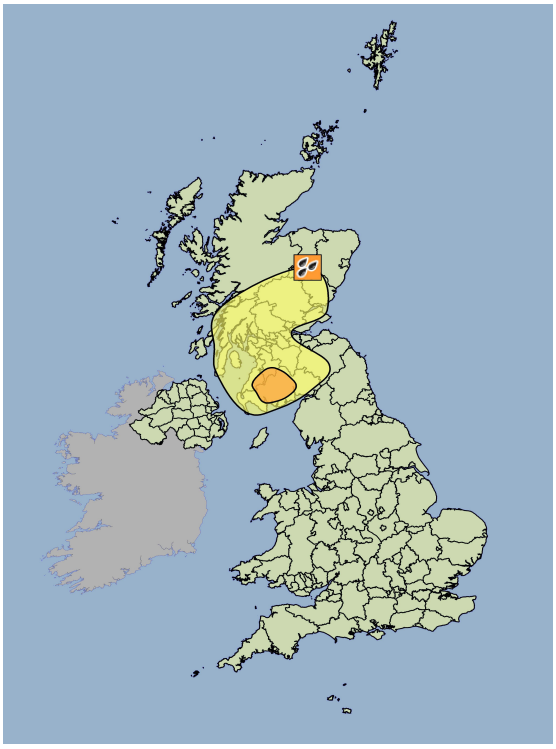
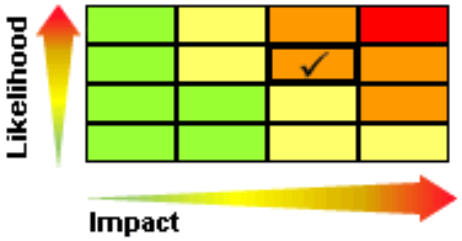
National Severe Weather Warning Service





Chief Forecasters Assessment
An active frontal system will move eastwards across Scotland during Sunday night and Monday morning, bringing a spell of heavy rain to southern and central areas. The largest rainfall totals will be over upland areas exposed to the strong southerly winds, notably across southwest Scotland where the increased confidence raises the warning level to Amber.

The Met Office have issued an **Amber Warning** of **Rain**

Valid from **00:05 on Mon, 30th Dec 2013** until **12:00 on Mon, 30th Dec 2013**

Further rain is expected during Sunday evening, becoming heavy overnight and on Monday morning. Rainfall accumulations of 20 to 30 mm are expected widely with 50 mm over high ground. There is now increased confidence for 50-60 mm of rain widely across southwest Scotland, thus the upgrade to Amber for this region, where the public should be prepared for the risk of flooding.
